THE RESULT

WHAT HAPPENS WHEN YOU TAKE A
TIME-PROVEN CONCEPT AND GIVE IT A
NEW APPLICATION?

KLADbrick.

Carolina Ceramics Brick Company's KLADbrick™ **outperforms** conventional precast concrete panels, because the look and feel of real brick is paired with the **cost-efficiencies** of precast panels yielding successes on many levels.

KLADbrick can save time and money.

In traditional construction, delays and compromised quality may be experienced as a result of inconsistent jobsite conditions. Weather delays can quickly destroy the profitability of a project. Using Carolina Ceramics' KLADbrick presents savings in several ways. First, the panels are assembled off-site in a precast factory, **eliminating the possibility of weather delays.** Off-site assembly also helps **ensure quality control** as the panels are made in a consistent environment under watchful, experienced supervisors. Once the panels have been assembled and mortared, they are transported to the jobsite for installation.

Beware of imitations.

Panels are gaining popularity as a building system among architects and contractors because the **efficiency of construction is dramatically increased.** However, unadorned concrete tilt-ups lack the beauty and substance that panelized brick systems create. **KLADbrick fills the void between traditional brick walls and concrete panels.**

- **Architects enjoy more options and flexibility for design and style.**
- **Owners realize consistent, timely construction resulting in cost savings.**
- **Contractors experience less pressure from delays.**

**KLADbrick = Kerfed
